SUMMARY

Technology leader with 8+ years progressing from Software Engineer to Software Development Manager. Owns system architecture, cloud infrastructure, CI/CD, and API design while leading cross-functional teams across AI, healthcare, wellness, and enterprise products.

EDUCATION

University of Cebu

Bachelor of Science in Information Technology

Cebu, Philippines

2014 - 2018

EXPERIENCE

Vananaz Technologies

Philippines

Software Development Manager

Mar 2023 - Present

- Lead architecture design and cloud infrastructure planning across multiple production platforms, defining service boundaries, data flows, and engineering standards.
- Establish CI/CD pipelines, branching strategies, and deployment automation while managing cross-functional teams and code review standards that improve release stability.

Development Lead Supervisor

Oct 2021 - Mar 2023

- Oversaw AWS-based solution delivery and guided teams on scalable architecture, engineering standards, and production release practices.
- Coordinated technical decision-making across concurrent client initiatives, aligning engineering output with scope, quality, and delivery timelines.

Senior Development Leader

Dec 2019 - Oct 2021

- Led full-stack delivery across React, Laravel, Node.js, Firebase, and MySQL, from API and database design through frontend integration.
- Conducted architecture and code reviews, mentored developers, and improved system quality through refactoring and shared implementation standards.

Software Engineer

Apr 2018 - Dec 2019

- Built web and mobile applications with React, React Native, and cloud services, contributing to API development, workflow automation, and CI-backed testing practices.

HIGHLIGHTED PROJECTS

AI-Powered Motion and Posture Analysis Platform

Feb 2023 - Jan 2026

- Redesigned system architecture for AI processing workflows, defining service-layer boundaries and data flows to improve scalability and long-term maintainability.
- Improved app experience on the posture analysis platform by optimizing heavy Three.js 3D rendering and large file asset loading for smoother, more responsive interactions.
- Built Node.js and Python REST APIs, optimized AWS RDS and DynamoDB schemas, and implemented CI/CD pipelines that strengthened deployment stability.

Wellness Facility Posture Analysis and CRM Platform

Aug 2023 - Jun 2024

- Structured greenfield architecture across frontend, backend, and AWS, including repository standards, branching strategy, and cloud deployment workflows.
- Led a cross-functional team of 10 to deliver a production-ready platform on schedule, reducing defects through structured reviews and Jest test coverage.

Online Medical Consultation Platform

Jan 2023 - Aug 2023

- Defined scalable Laravel backend architecture and REST APIs for consultation and patient workflows, then refactored legacy modules and optimized MySQL queries to improve performance and maintainability.

Real-Time Cloud-Based Virtual Whiteboard Platform

Mar 2022 - Jul 2022

- Built real-time collaboration features with Laravel and MySQL for concurrent user sessions while serving as technical liaison, translating client requirements into scoped engineering tasks and delivery milestones.

ADDITIONAL

Technical Skills System Architecture, AWS, Firebase, GCP, CI/CD, React.js, React Native, Vue.js, Node.js, PHP, Laravel, Python, MySQL, DynamoDB, Firestore, Jest, Git, REST APIs
